Attorney Docket No.: 2003P08214L

CENTRAL FAX CENTER

IN THE CLAIMS:

OCT 1 7 2006

This listing of the claims will replace all prior versions and listings of the claims in the application:

1. (Currently Amended) A telecommunications system, comprising:

a plurality of network clients including a positioning controller and a communications controller; and

a positioning server including a coordinating controller for maintaining a database of network clients to be tracked and provide updates of position-related information to a presence server, the presence server defining one or more associated location/presence correlation pairs defining a geographical area including a userdefined boundary and corresponding presence status;

wherein a presence status is maintained if the network client is within the borders of the geographical area; and

a mapping engine for defining the geographical area;

wherein said plurality of network clients are configured to transmit position information received via said positioning controller to said positioning server via said communications controller.

- 2. (Original) A telecommunications system in accordance with claim 1, wherein said positioning controller receives global positioning network signals for determining a position of an associated network client.
- 3. (Original) A telecommunications system in accordance with claim 2, wherein said communications controller comprises a cellular network controller for transmitting on a cellular telephone network to said positioning server.
- 4. (Original) A telecommunications system in accordance with claim 1, wherein positioning server includes an e-mail message generator for communicating said updates to said presence server.

10/17/2006 13:08

Serial No.: 10/672,641 Attorney Docket No.: 2003P08214US

SIEMENS CORP. IPD-W

 (Original) A telecommunications system in accordance with claim 1, wherein positioning server includes an Instant Messaging message generator for communicating said updates to said presence server.

- 6. (Original) A telecommunications system in accordance with claim 1, wherein positioning server includes a Session Initiation Protocol (SIP) message generator for communicating said updates to said presence server.
- 7. (Original) A telecommunications system in accordance with claim 1, wherein said presence server maintains a database of location and presence correlation pairs for registered users and receives location updates from said positioning server.
- 8. (Original) A telecommunications system in accordance with claim 1, wherein said positioning server maintains a database of location and presence correlation pairs for registered users and provides presence updates to said presence server.
- 9 (Currently Amended) A telecommunications device, comprising: a positioning controller adapted to determine positioning information for said telecommunications device; and

a cellular telephone controller adapted to receive said positioning information from said positioning controller and cause said positioning information to be transmitted to an associated server:

wherein the telecommunications device includes a rules database and is configured to receive one or more location-presence correlation rules for storing in the rules database from a user mapping engine, the user mapping engine further configured to allow a user to define a location and a user-defined boundary associated with the location.

Attorney Docket No.: 2003P08214US

- 10. (Original) A telecommunications device as recited in claim 9, wherein said positioning controller receives Global Positioning System (GPS) signals to determine said positioning information.
 - 11. (Canceled).
- 12. (Previously Presented) A telecommunications device as recited in claim <u>9</u>, wherein said cellular telephone controller transmits changes to location and presence status to said associated server.
- 13. (Previously Presented) A telecommunications device as recited in claim <u>9</u>, wherein said cellular telephone controller transmits changes to location status to said associated server.
- 14. (Previously Presented) A telecommunications device as recited in claim <u>9</u>, wherein said cellular telephone controller receives updates to said rules database from said associated server.
 - 15. (Currently Amended) A telecommunications server, comprising:
- a presence control unit adapted to receive and maintain presence information for a plurality of users; and
- a location control unit adapted to receive and maintain location information for said plurality of users, said location information correlated with said presence information; and
- a first interface for receiving predefined presence-location correlation rules from associated users, said rules including a geographical area defined by a mapping engine, the geographical area including a user-defined boundary associated with the area.

Attorney Docket No.: 2003P08214US

16. (Canceled)

- 17. (Previously Presented) A telecommunications server in accordance with claim 15, wherein receiving said location information comprises receiving user-positioning updates from a remote user from an operably coupled wireless network.
- 18. (Original) A telecommunications server in accordance with claim 17, wherein said operably coupled wireless network comprises a cellular telephone network.
- 19. (Original) A telecommunications server in accordance with claim 17, wherein said operably coupled wireless network comprises a personal communication service (PCS) network.
- 20. (Original) A telecommunications server in accordance with claim 17, further comprising a second interface for transmitting user-positioning updates to an operably coupled enterprise server.
- 21. (Original) A telecommunications server in accordance with claim 20 wherein said receiving said user-positioning updates comprises receiving said user-positioning updates via a telephone dial-in and said second interface comprises an e-mail interface.
- 22. (Original) A telecommunications server in accordance with claim 20 wherein said receiving said user-positioning updates comprises receiving said user-positioning updates via a telephone dial-in and said second interface comprises a text messaging interface.

Serial No.: 10/672,641 Attorney Docket No.: 2003P08214US

SIEMENS CORP. IPD-W

23. (Original) A telecommunications server in accordance with claim 17. further comprising a second interface for transmitting user-positioning updates to one or more local users in a packet telephony format.

24. (Currently Amended) A telecommunications method, comprising: generating one or more user positioning and presence correlation rules. said generating including defining one or more geographical areas using a mapping engine, said one or more geographical areas including one or more user-defined boundaries;

receiving said one or more user positioning and presence correlation rules at a local controller; and

transmitting said one or more positioning and presence correlation rules to a remote device.

25. (Original) A telecommunications method in accordance with claim 24, further comprising:

receiving positioning updates at said remote device; and transmitting presence updates to other local controllers or remote devices as specified in said one or more positioning and presence correlation rules.

- 26. (Original) A telecommunications method in accordance with claim 25. wherein said receiving one or more user positioning and presence correlation rules comprises receiving at a server one or more rules set via a network interface device operably coupled to said one or more local controllers.
- 27. (Original) A telecommunications method in accordance with claim 26, wherein said receiving positioning updates comprises receiving one or more signals from a global positioning network.

Attorney Docket No.: 2003P08214US

- 28. (Original) A telecommunications method in accordance with claim 25, further comprising transmitting positioning updates from said remote device to one or more servers via a radio-linked network.
- 29. (Original) A telecommunications method in accordance with claim 28, wherein said radio-linked network comprises a cellular telephone network.
- 30. (Original) A telecommunications method in accordance with claim 28, wherein said radio-linked network comprises a personal communication service (PCS) network.
- 31. (Original) A telecommunications method in accordance with claim 28, wherein said one or more user positioning and presence correlation rules comprise one or more time-of-day parameters.
- 32. (Original) A telecommunications method in accordance with claim 28, wherein said one or more user positioning and presence correlation rules comprise one or more day-of-week parameters.
